

Bringing an entirely new experience to the presenter!...

You can walk into any room, in any location, at any time and in 3 touches start any presentation in less than 10 seconds – no setup, no cables and no hassle!

3touch is an innovative Presentation Management solution which:

- Stores, manages and controls all presentation material in a central repository
- Delivers that material to any room or presentation device via the network
- Provides a powerful, user friendly interface giving the presenter maximum confidence and control

The key characteristic of 3touch's system is that any speaker can walk up to the podium and immediately start delivering their presentation. The key benefits are that presenters can now maximise their time and the audience impact.

3touch creates a bridge between your Audio Visual equipment and your Information Technology infrastructure. For the organisation this offers central control and security around presentation material. For the individual presenter it gives complete flexibility and mobility.

In addition the powerful 3touch user interface provides a simple but revolutionary new presentation experience.

Organisations invest significantly in their AV equipment, IT infrastructure, developing their messages and training their people to present. 3touch augments all of these areas of investment and gives you a tool to focus on the creation, management and delivery of presentation, training or lecture material as a business process in itself.

Many people either don't like presenting or are uncomfortable with setting up or using AV technology.

These are very real fears which can significantly impact the confidence and professionalism of the presenter. In the boardroom, lecture theatre, conference room, classroom or meeting room, 3touch makes the management, control and delivery of presentation material easy – directly addressing these fears and allowing the speaker to concentrate solely on their message.

At 3touch we do everything we can to ensure that when you are on your feet in front of a class, an audience or a customer you can focus entirely on what you want to say, how you want to say it and how the listeners are receiving it ... freedom to perform.

The 3touch User Interface

In today's environment presentations are usually delivered via a laptop connected to a projector. The laptop screen is then sent via the projector and the exact information visible on the screen is shared with the audience.

Unlike this conventional set-up, the speaker does not share the entire desktop with the audience – the 3touch interface gives the user their own view and ultimate control.

The 3touch dashboard allows the presenter to:

- View current and next slides on one screen improving flow of narrative
- Skip material that is not relevant or needed by allowing you to access a particular slide directly
- Navigate through the material whilst presenting
- View your notes and reminders of key points – sometimes missed!
- Track the timing of the session
- Present multiple file formats, e.g. PowerPoint, Word, Excel, pdf and media files directly from source

....and all while the audience only sees what you want them to see

3touch provides:

- A standard, powerful and intuitive interface that ensures confident presentation delivery
- A central repository for presentation material which ensures that the most up to date material is always available in any room, in any location
- Presentation delivery to any projector, screen or PC/Laptop (wired or wireless)
- Simultaneous delivery of presentations to any screen, any room, multiple rooms, or multiple locations
- Secure access to all available presentation material (user privileges allowing)
- Access control to enhance security and protect the integrity and accuracy of the information by allowing for standardisation of format or content where required
- A consistent interface for giving presentations reducing the need for training on various types of equipment
- Ability to remotely view the status of AV equipment in each room
- Log files to analyse usage of presentation material and equipment

3touch Conference Manager

If you have multiple speakers in a conference or meeting it can be very distracting to be swapping laptops or having the audience judge you by the neatness of your Desktop as you navigate to the next presentation ... it also loses valuable time and the flow of the session. Whether it's in a monthly divisional meeting or a large conference centre - it's just not professional.

Using 3touch Conference Manager the speakers are able to smoothly follow on from each other; one presentation rolling seamlessly on to the next to give a highly efficient, polished and professional image. It can all be set up in advance to try and reduce the pressure on the day – and the speaker is again able to forget the headaches of the technology and focus clearly on communicating the message to their audience.
